

Project Title: An Interactive Web-Tool to Support the Development of Interdisciplinary Primary Care Teams

Principle Investigator: Dr. Dominika Wranik

Plain Language Summary – Why Was This Effective?

- The project itself is innovative and well described.
- The project will further package the results of the knowledge synthesis in a format that is more appropriate for the intended audience.

Objectives – Why Was This Effective?

- Objectives were clearly identified and encompass the main activities to be completed with the use of the project funding.

Project Description – Why Was This Effective?

- Comprehensive overview of the project and its intended outcomes and benefits.
- The team's primary intention is well described.
- Justification of alignment with NSHRF priorities is strong.
- Mobilizes the evidence regarding the effectiveness of different elements of primary care teams.

Work Plan and Timeline – Why Was This Effective?

- Description of webtool is comprehensive.
- Provides a clear description of the next steps that need to be completed.
- Work plan is clear and feasible.
- The skillset and pre-existing relationship of the team members and the in-kind support should facilitate the achievement of the milestones stated in the project outline.
- The research team is comprised of strong scholars from diverse disciplines.
- The roles of the team members are well-described, and knowledge users are included in the team.

Impact – Why Was This Effective?

- Has strong potential to inform and improve decision-making in health care in Nova Scotia and elsewhere.
- This is a strong and thoughtful knowledge sharing project that has great potential to promote evidence-informed decision-making in primary health care.
- The potential benefit to knowledge users is also well described.
